National Type Evaluation Program (NTEP) Measuring Sector

Annual Meeting September 20-21, 2016 Denver, Colorado

Meeting Agenda

GLOSSARY OF ACRONYMS	2
CARRY-OVER ITEMS:	2
 Transfer Standards Testing - NIST HB 44 Section 3.32. LPG & NH3 Section 3.37. Mass Flow Meters Code 	
NEW ITEMS:	5
2. Recommendations to Update NCWM Pub 14 to Reflect Changes to	NIST HB 445
A. G-S.1. Identification (Software)	5
B. G-S.9. Metrologically Significant Software Updates	
C. LMD & VTM Codes - Verification of Linearization Factors (Se	&T 330-3 and S&T 331-4)30
D. Table S.2.2. Categories of Sealing and Methods of Sealing (S& 338-1; 339-1) – VTM, LPG, Cryogenic LMD, Milk Meters, MI	FM, CO2, and Hydrogen Gas
Metering Codes	
E. LPG Code Updates - S.1.4.3. Power Loss, etc. (S&T 332-2)	
F. LPG Code – S.2.1. Vapor Elimination (S&T 332-3)	
G. MFM Code – Natural Gas (S&T 337-2)	
3. NCWM Publication 14, LMD Checklist, Laboratory/Field Evaluatio	
Systems, Section B - Previously Evaluated Meters4. Display of Unit Price in Tenths of a Cent	
 Display of Onterfice in Fendis of a Cent. NCWM Publication 14 Electronic Cash Registers Interfaced with Re 	
- Change to Title.	1
 Manual Volume Entries – Delete Entry in NCWM Publication 14 with Retail Motor-Fuel Dispensers Checklist. 	Electronic Cash Registers Interfaced
ADDITIONAL ITEMS AS TIME ALLOWS:	
7. S&T 2017 New Item – General Code - G-S.5.2.2. Digital Indication	and Representation49
8. S&T 2017 New Item – General Code - G-UR.3.3. Position of Equip	
9. S&T 2017 Carryover Item – LMD Code - Recognized the Use of Di	
10. S&T 2017 Carryover Item – VTM Code - S.3.7. Manifold Hose Flux	
11. S&T 2017 New Item – VTM Code - S.5.7. Meter Size	
 S&T 2017 New Item – VTM Code - N.4.X. Automatic Stop Mechaniand UR.2.6. Automatic Stop Mechanism 	
13. S&T 2017 Carryover Item – LPG & NH3 Code - N.4.2.3. For Whol	
14. S&T 2017 New Item – Appendix A – Fundamental Considerations	
15. S&T 2017 New Item – Appendix A – Fundamental Considerations	
S.2.1. Vapor Elimination.	

APPENDICES:

Appendix A: Guidance on Empirical Analysis – Ref Sector Agenda Item 2.E.

Glossary of Acronyms			
CC	Certificate of Conformance	OIML	International Organization of Legal Metrology
DMS	Division of Measurement Standards	OWM	Office of Weights and Measures (NIST)
ECR	Electronic Cash Register	PD	Positive Displacement
HB 44	NIST Handbook 44 "Specifications, Tolerances, and Other Technical Requirements for Weighing and Measuring Devices"	Pub 14	NCWM Publication 14
LMD	Liquid Measuring Devices	RMFD	Retail Motor-Fuel Dispenser
mA	milliamp	SI	International System of Units
NCWM	National Conference on Weights and Measures	S&T	Specifications and Tolerances
NIST	National Institute of Standards and Technology	VTM	Vehicle Tank Meter
NTEP	National Type Evaluation Program	W&M	Weights and Measures
NTETC	National Type Evaluation Technical Committee		
This glossary is meant to assist the reader in the identification of acronyms used in this agenda and does not imply that these terms are used solely to identify these organizations or technical topics.			

Carry-over Items:

1. Transfer Standards Testing - NIST HB 44 Section 3.32. LPG & NH₃ Liquid-Measuring Devices Code and Section 3.37. Mass Flow Meters Code.

Source: Michael Keilty, Endress + Hauser Flowtec AG; [2014 NCWM S&T Item 332-2 (D)] and [2014 NCWM S&T Item 337-3 (D)]

Recommendation: The Sector is asked to provide input on two proposals being developed by Mr. Michael Keilty (Endress + Hauser Flowtec AG). These items appeared on the 2014 through 2016 NCWM S&T Agendas, most recently appearing as Items 332-5 N.3. Test Drafts and Item 337-3 N.3. Test Drafts.

These proposals recommend the addition of a paragraph to the "Notes" section of the LPG and Anhydrous Ammonia Liquid-Measuring Devices Code and the Mass Flow Meters Code specifying the size of the test draft when using a "transfer standard." The current proposal is outlined below:

Amend NIST Handbook 44 LPG and Anhydrous Ammonia Liquid-Measuring Devices as follows:

N.3. Test Drafts. –

<u>N.3.1 Minimum Test</u> - Test drafts should be equal to at least the amount delivered by the device in one minute at its normal discharge rate. (Amended 1982)

<u>N.3.2. Transfer Standard Test.</u> – <u>When comparing a meter with a calibrated transfer standard, the test draft shall be equal to at least the amount delivered by the device in 2 minutes at its maximum discharge rate.</u>

Amend NIST Handbook 44 Mass Flow Meters Code as follows:

N.3. Test Drafts. –

<u>N.3.1 Minimum Test</u> - Test drafts should be equal to at least the amount delivered by the device in one minute at its normal discharge rate.

(Amended 1982)

<u>N.3.2. Transfer Standard Test.</u> – <u>When comparing a meter with a calibrated transfer standard, the test draft shall be equal to at least the amount delivered by the device in 2 minutes at its maximum discharge rate.</u>

Background: At its 2014 meeting, the Measuring Sector was asked to discuss and comment on two proposals that were submitted to the four regional weights and measures associations in Fall 2014. These proposals would amend NIST Handbook 44, LPG and Anhydrous Ammonia Liquid-Measuring Devices and Mass Flow Meters codes, Notes section, Test Drafts, to allow transfer standards (master meters) to test and place into service. The Sector thoroughly discussed and vetted this item. There was extensive discussion about the transfer standard (also referred to as a "master meter") itself, such as:

- The need for the master meter to be a superior standard to the meter being examined;
- Verification procedures including the proper reference weighing device's capacity and division size;
- The need to maintain control charts on the master meter;
- Frequency of re-verification for the master meter;
- The need to develop NIST Handbook 105 series specifications, test procedures, and tolerances for "master meters;"
- Development of criteria and the ability of the master meter to assure legal traceability; and
- Training staff in the correct use of master meters in field applications; etc.

The Sector agreed that transfer standards are valuable in verifying measuring systems that are not readily tested with conventional test methods. Examples include measuring systems used to measure products such as CNG, LNG, viscous products, corrosive products, and other products whose physical properties create challenges in testing. The Sector supported moving these proposals forward as "Voting" items.

At the Sector's 2015 Meeting, this issue was again discussed and the Sector reached the following decision.

After lengthy discussion on this issue, the Sector did not reach any conclusions on this proposal to share with the submitter or with the S&T Committee. The Sector reiterated points made during

its 2014 meeting (see "Background" section earlier in this item). Additionally, while the Sector does not have specific recommendations regarding the proposal, the following "observations" might be useful for further work on this issue.

- The use of master meters has particular appeal for use in testing devices such as CNG metering systems where factors such as product type, safety, environmental factors, and the availability of equipment pose special challenges.
- Use of gravimetric testing for CNG has been reported to pose challenges such as returning/disposing of product; procuring a suitable scale and test tank; and controlling environmental influences that may affect testing results.
- Field standards must comply with the general criteria in NIST Handbook 44, Appendix A, Fundamental Considerations includes general criteria for field standards.
- Recognition of transfer standards in NIST Handbook 44 does not, by itself, ensure recognition or acceptance of these devices as an acceptable test method.
- Specific types of field standards do not have to be specifically identified in NIST Handbook 44 in order for a weights and measures jurisdiction to recognize their use in testing measuring devices.
- Additional provisions must be in place to ensure traceability of measurements using a transfer standard as an official test method. Examples include documentary standards for the field standard (e.g., NIST Handbook 105 applicable to the standard); training for laboratory metrologists in the testing of the field standard; control procedures to ensure continued performance of the transfer standard; training of field staff in the use of the transfer standard; and control procedures for maintaining the master meter.
- A master meter must perform better than the meter under test.

The Sector noted that the selection of appropriate test methods for type evaluation is an issue that is often faced by NTEP evaluating laboratories. The Sector agreed that guidelines on determining an appropriate test method(s) for an evaluation would be helpful to both the laboratories and manufacturers. Several Sector members including the following expressed an interest in working together to develop such guidelines for inclusion in Publication 14:

Marc Buttler, Emerson Process Management/Micro Motion John Roach, CA Division of Measurement Standards Michael Keilty, Endress + Hauser Flowtec AG, USA Tina Butcher, NIST OWM

This subgroup agreed to bring any recommendations it develops back to the Sector at its 2016 meeting as a carryover item, either as part of the H44 item or as a separate item for type evaluation criteria.

At the 2015 and 2016 NCWM Interim and Annual Meetings, the S&T Committee discussed both of the proposals in the "Recommendation" as a single item. The Committee heard comments from the submitter along with a list of benefits to using a master meter as the standard in testing meters used in applications to measure CNG, LNG, and LPG in comparison to using volumetric or gravimetric standards. The Committee also heard a number of comments, which were reiterated and summarized at its 2015 Annual Meeting regarding additional issues that must be carefully considered. See the Committee's 2016 Interim Report for details on discussions leading up to the 2016 NCWM Annual Meeting. At the NCWM Annual Meeting, the S&T Committee agreed to maintain these two items as developing items to allow the submitter time to address the comments received.

Recommendation: The Sector will hear an update on any work that has progressed within the subgroup. As of the writing of the agenda, the subgroup did not have any information to report.

New Items:

2. Recommendations to Update NCWM Pub 14 to Reflect Changes to NIST HB 44.

Source: NCWM S&T Committee

Background:

At its 101st Annual Meeting, the National Conference on Weights and Measures (NCWM) adopted the following items that will be reflected in the 2017 Edition of NIST Handbook 44. These items were included on the Sector's agenda to inform the Measuring Sector of the NCWM actions and to recommend corresponding changes to NCWM Publication 14. For additional details on these items, refer to the NCWM S&T Committee's 2016 Interim Report and its accompanying appendix, which can be found on the NCWM's web site at:

http://www.ncwm.net/meetings/annual/archive

http://www.ncwm.net/ resources/dyn/files/75561831z10b352a8/ fn/4-ST-Report-Master-Web.pdf

A. G-S.1. Identification (Software)

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted the following changes to General Code Paragraph G-S.1. Identification:

G-S.1. Identification. – All equipment, except weights and separate parts necessary to the measurement process but not having any metrological effect, shall be clearly and permanently marked for the purposes of identification with the following information:

- (a) the name, initials, or trademark of the manufacturer or distributor;
- (b) a model identifier that positively identifies the pattern or design of the device;
 - (1) The model identifier shall be prefaced by the word "Model," "Type," or "Pattern." These terms may be followed by the word "Number" or an abbreviation of that word. The abbreviation for the word "Number" shall, as a minimum, begin with the letter "N" (e.g., No or No.). The abbreviation for the word "Model" shall be "Mod" or "Mod." Prefix lettering may be initial capitals, all capitals, or all lowercase.
 [Nonretroactive as of January 1, 2003] (Added 2000) (Amended 2001)
- (c) a nonrepetitive serial number, except for equipment with no moving or electronic component parts and not-built for purpose software-based software devices software;
 [Nonretroactive as of January 1, 1968]
 (Amended 2003)
 - (1) The serial number shall be prefaced by words, an abbreviation, or a symbol, that clearly identifies the number as the required serial number.
 [Nonretroactive as of January 1, 1986]
 - (2) Abbreviations for the word "Serial" shall, as a minimum, begin with the letter "S," and abbreviations for the word "Number" shall, as a minimum, begin with the letter "N" (e.g., S/N, SN, Ser. No., and S. No.).

[Nonretroactive as of January 1, 2001]

- (d) the current software version or revision identifier for not-built-for-purpose software-based devices;
 <u>manufactured as of January 1, 2004 and all software-based devices or equipment</u> <u>manufactured as of January 1, 2022;</u> [Nonretroactive as of January 1, 2004] (Added 2003) (Amended 2017)
 - (1) The version or revision identifier shall be:
 - *i.* prefaced by words, an abbreviation, or a symbol, that clearly identifies the number as the required version or revision;
 [Nonretroactive as of January 1, 2007]
 (Added 2006)

Note: If the equipment is capable of displaying the version or revision identifier but is unable to meet the formatting requirement, through the NTEP type evaluation process, other options may be deemed acceptable and described in the CC. (Added 2017)

- *ii.* continuously displayed or be accessible via the display. Instructions for displaying the version or revision identifier shall be described in the CC. As an alternative, permanently marking the version or revision identifier shall be acceptable providing the device does not always have an integral interface to communicate the version or revision identifier. [Nonretroactive as of January 1, 2022] (Added 2017)
- (2) Abbreviations for the word "Version" shall, as a minimum, begin with the letter "V" and may be followed by the word "Number." Abbreviations for the word "Revision" shall, as a minimum, begin with the letter "R" and may be followed by the word "Number." The abbreviation for the word "Number" shall, as a minimum, begin with the letter "N" (e.g., No or No.). <u>Prefix lettering may be initial capitals, all capitals, or all lowercase.</u> [Nonretroactive as of January 1, 2007] (Added 2006) (Amended 2017)
- (e) a National Type Evaluation Program (NTEP) Certificate of Conformance (CC) number or a corresponding CC Addendum Number for devices that have a CC.
 - (1) The CC Number or a corresponding CC Addendum Number shall be prefaced by the terms "NTEP CC," "CC," or "Approval." These terms may be followed by the word "Number" or an abbreviation of that word. The abbreviation for the word "Number" shall, as a minimum, begin with the letter "N" (e.g., No or No.) [Nonretroactive as of January 1, 2003]

The required information shall be so located that it is readily observable without the necessity of the disassembly of a part requiring the use of any means separate from the device. (Amended 1985, 1991, 1999, 2000, 2001, 2003, and, 2006 and 2017)

Recommendation: As a result of the changes to General Code paragraph G-S.1., the Sector is asked to the Sector is asked to recommend changes to the following NCWM Publication 14 checklists as outlined in the tables below:

- Liquid-Measuring Devices Checklist;
- Hydrocarbon Gas-Vapor Measuring Devices Checklist;
- Cryogenic Liquid-Measuring Devices Checklist;

• ECR Interfaced with RMFD Checklist in NCWM Publication 14.

Liquid-Measuring Devices Checklist, Page LMD-20:

1. General

Code Reference: G-S.1. Identification

Virtually all weighing and measuring equipment must be clearly and permanently marked with, or display, the manufacturer's name or trademark, model designation, and serial number. Service station dispensers, consoles, cash registers interfaced with dispensers, retrofit computing registers, and customer card-activated terminals must all have these markings. As a practical matter, some equipment need not have a serial number. "Satellite" modules in a modular system (e.g., keyboard module and cash drawer) need not have serial numbers because they do not have any "intelligence." A serial number is required in the following circumstances:

Separate Device

A device is capable of operating as a weighing or measuring device without interfacing with or connecting to other components.

Separate Main Element

Primary indicating elements must be marked. The device is a major element in the weighing or measuring system, which means, it is metrologically significant to the operation and/or performance of the system and interfaces with different compatible main elements. Examples include the following: indicating elements, weighing elements, meter registers, meter measuring elements (vehicle tank meters and loading rack meters.)

Component

The device is a component in a system, may be used in different models of devices, and is sufficiently complex to warrant a separate evaluation and a separate CC (e.g., load cells and vapor recovery nozzles.) Such a device may or may not be placed into an enclosure with other components of the system. When installed in an enclosure, the complete device must be marked with a serial number, and the one serial number will suffice for the entire collection of components. If not placed in an enclosure with other components, the component must be marked with a serial number.

The following are examples of the application of these criteria:

Retail Motor Fuel Dispensers:

- Whole unit requires a serial number.
- Indicating elements do not require a separate serial number.
- Measuring element does not require a separate serial number.
- The measuring element is metrologically significant because it affects the operation of the system as a whole; however, it is always enclosed in a housing, which has a S/N for the whole device.

Note: A conventional nozzle on a retail motor fuel dispenser is not a sufficiently complex device to warrant a special type evaluation or a serial number. The nozzle does not affect the accuracy of the delivery. A separate requirement addresses the anti-drain valve. A vapor recovery nozzle does warrant a separate evaluation because it is a complex device, and it does have the potential to affect the accuracy of the device during the normal operation of the device. One model of vapor recovery nozzle can be used on many models of dispensers. The proper operation of a vapor recovery nozzle and system is "important" as defined by federal regulations. Thus, it is reasonable to require a vapor recovery nozzle to be marked with a serial number.

Vehicle Tank Meters

- Serial number is required on the meter; it is a major component of the system since it is required for the system to operate.
- Serial number is required on the indicating elements.

Markings:

Equipment must be marked on a surface that is an integral part of the device, and the marking must be visible after installation. If the required information is not positioned in a visible location after installation, a duplicate, permanent identification badge must be located in a visible location after installation. A removable cover is an acceptable location for the required information only if a permanent ID badge is located elsewhere on the device.				
or screws are not per and is difficult to reme	The information may be on a metal or plastic plate that is attached with pop rivets, adhesive, or other means, but removable bolts or screws are not permitted. A foil or vinyl badge may be used provided that it is able to survive wear and tear, remains legible, and is difficult to remove. The printing on a foil badge must be easily readable and not easily obliterated by rubbing with a relatively soft object (e.g., the wood of a pencil.)

B. G-S.9. Metrologically Significant Software Updates

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted a new General Code Paragraph G-S.9. Metrologically Significant Software Updates as follows:

G-S.9. Metrologically Significant Software Updates. - A software update that changes the metrologically significant software shall be considered a sealable event.

Recommendation: As a result of the addition of paragraph G-S.9., the Sector is asked to the Sector is asked to recommend changes to the following NCWM Publication 14 checklists as outlined in the tables below:

- Liquid-Measuring Devices Checklist;
- Hydrocarbon Gas-Vapor Measuring Devices Checklist;
- Cryogenic Liquid-Measuring Devices Checklist;
- ECR Interfaced with RMFD Checklist in NCWM Publication 14.

Note that the recommended changes to the Hydrocarbon Gas-Vapor Measuring Devices Checklist also propose the addition of Code References which appear to have been inadvertently omitted from the checklist, perhaps during a previous re-organization of the measuring checklists.

Liquid-Measuring Devices Checklist:

Page LMD-25: Modify the title of Code Reference G-S.8. to include a reference to new paragraph G-S.9. Metrologically Significant Software Updates.

Code Reference: G-S.8. Sealing Electronic Adjustable Components; and Provision for Metrologist Sealing of Adjustable Components; Provision for Metrological Data Change or Audit Trial and G-S.9. Metrologically Significant Software Updates.

Note: Also reference specific code requirements for sealing and audit trails including Liquid Measuring Devices Code paragraph S.2.2., Mass Flow Meters Code paragraph S.3.5, and other applicable specific code requirements.

32.20. Electronic adjustable components that affect the performance of a device shall provide for an approved means of security (e.g. data change audit trail) or for physically applying a security seal. These This includes components include such as the mechanical adjustment mechanism of meters; the electronic calibration factor and automatic temperature compensator for electronic meter registers; selection of pressure of density correction capability and correction values; and pulser setting and gallon/liter conversion switches when they may accidentally or intentionally be used to perpetrate fraud; and software updates that change the metrologically significant software.

Page LMD-124: Modify Appendix A as follows to specify that metrologically significant software updates are considered "sealable events."

Typical Features and Parameters to Be Sealed

The following provides examples of configuration and calibration parameters that are to be sealed. The examples are provided for guidance and are not intended to cover all possible parameters.

Calibration Parameters:

Calibration parameters are those parameters whose values are expected to change as a result of accuracy adjustments. Examples include the following:

- 1.5.3.1. Measuring element adjustments where linearity corrections are used (e.g., flow rate 1 and meter factor 1, flow rate 2 and meter factor 2, etc.)
- 1.5.3.2. Mass flow meter adjustments for zero adjustments (not simply setting the display to zero) and span settings.

Configuration Parameters:

Configuration parameters are those parameters where the values are expected to be entered once only and not changed after all initial installation settings have been made. Examples include the following:

- 2. Octane or other blend setting ratios (optional in Canada at this time.)
- 3. Temperature, pressure, density, and other sensor settings for zero, span, and offset values.
- 4. Measurement units (in Canada, only if not displayed or printed on the primary register.)
- 5. Temperature compensation table, liquid coefficient of expansion, or compressibility factors or tables.
- 6. Liquid density setting (in Canada, only if not displayed or printed on the primary register) and allowable liquid density input range.
- 7. Vapor pressures of liquids if used in calculations to establish the quantity.
- 8. Meter or sensor temperature compensation factors.
- 9. False or missing pulse limits for dual pulse systems (Canada only.)
- 10. On/off status of automatic temperature, pressure, or density correction.
- 11. Automatic or manual data input for sensors.
- 12. Dual pulse checking feature status on or off.
- 13. Flow control settings (optional in Canada.)
- 14. Filtering constants.

15. Software updates that change the metrologically significant software.

Electronic Cash Registers Interfaced with Retail Motor-Fuel Dispensers Checklist:

<u>Page ECRD-6</u>: Modify the title of the following code reference to reflect new paragraph G-S.9. Metrologically Significant Software Updates.

Code Reference: G-S.8. Provision for Sealing Electronic Adjustable Components <u>and G-S.9.</u> Metrologically Significant Software Updates.

Remote controllers, which have the capabilities to electronically adjust components that affect the performance of a device, shall have provisions for approved means of security. See LMD - Appendix A - Philosophy for Sealing, Typical Features to be Sealed.

A. LMD Code; VTM Code; and LPG & NH₃ - Return to Zero (S&T 330-1; 331-1; and 332-1)

Background: At the 2016 NCWM Annual Meeting, the NCWM modified the LMD Code and the LPG & NH₃ Code as follows to specify that primary indications are not permitted to be resettable during a delivery:

LMD Code: S.1.6.3. Return to Zero.

- (a) The primary indicating elements, and primary recording elements if the device is equipped to record, shall be readily returnable to a definite zero indication. However, a key-lock operated or other self-operated device may be equipped with cumulative indicating or recording elements, provided that it is also equipped with a zero-return indicating element.
- (b) It shall not be possible to return primary indicating elements, or primary recording elements beyond the correct zero position.
- (c) Primary indicating elements shall not be resettable to zero during a delivery.

(Amended 1972 and 20XX)

VTM Code:

S.1.1.5. Return to Zero. – Primary indicating elements shall be readily returnable to a definite zero indication. Means shall be provided to prevent the return of primary indicating elements, and of primary recording elements if these are returnable to zero, beyond their correct zero position. **Primary indicating elements shall not be resettable to zero during a delivery.**

LPG NH₃ Code:

S.1.4.2. Return to Zero.

- (a) Primary indicating elements shall be readily returnable to a definite zero indication.
- (b) Primary recording elements on a stationary retail device shall be readily returnable to a definite zero indication if the device is equipped to record.
- (c) Means shall be provided to prevent the return of primary indicating elements and of primary recording elements if these are returnable to zero, beyond their correct zero position.

(d) Primary indicating elements shall not be resettable to zero during a delivery.

(Amended 1990 and 20XX)

Recommendation: The Sector is also asked to consider modifying the LMD Checklist as follows, to reflect the changes to the above three codes with regard to "return to zero" requirements.

LMD Checklist, Checklist and Test Procedures for RMFDs:

Page LMD-37: Modify Code Reference S.1.6.3. as follows:

Code Reference: S.1.6.3. Return to Zero

The primary indicating and recording elements of a retail device shall readily return to a definite zero indication. Key-lock and other self-operated devices must have a zero-return indicating element, but they are not required to have the recording element return to zero. These devices may be equipped with cumulative recording elements. The primary indicating and recording elements shall not go beyond their correct zero position. **Primary indicating elements shall not be resettable to zero during a delivery.**

7.28	Does the device have a primary recording element?	Yes No N/A
7.29	The indicating and recording elements of a retail device shall readily returnable to a definite zero indication.	Yes No N/A
7.30	Key-lock and self-operated devices shall have an indicating element that return to zero.	Yes No N/A
7.31	Does the device have:	Yes No N/A
	7.31.1. A cumulative indicating element?	Yes No N/A
	7.31.2. A cumulative recording element?	Yes No N/A
7.32	Primary indicating and recording elements shall not go beyond their correct zero position.	Yes No N/A
7.33	Primary indicating elements shall not be resettable to zero during a delivery.	Yes No N/A

LMD Checklist, Checklists and test Procedures for Specific Criteria for Vehicle-Tank Meters:			
Page LMD-58:	Modify Code Reference S.1.1.5. as follows:		
Code Refer	rence: S.1.1.5. Return to Zero		
The primary	indicating elements on a vehicle tank meter must be returnable to zero before a delivery.		
If the regist	er has a printer, it is not required that the printer be returnable to zero. If it is returnable		
	n neither the indicating nor the recording element shall go beyond their correct zero		
-	te to the manner in which vehicle tank meters are operated, the outlet side of the meter		
	omatically or manually pressurized before the indicating and recording elements are set		
to zero. <u>Pri</u>	mary indicating elements shall not be resettable to zero during a delivery.		
22.8.	Primary indicating elements shall be readily returnable to a definite zero indication. \Box Yes \Box No \Box N/A Means shall be provided to prevent the return of the primary indicating or recording elements beyond their correct zero position.		
22.9.	Automatic or manual means shall be provided to assure that the system on the outlet \Box Yes \Box No \Box N/A side of the meter is pressurized before recording an initial zero condition as required by UR.2.1.		
22.10.	A printer shall be so designed that the recording of zero shall reflect the actual \Box Yes \Box No \Box N/A initial condition of the meter prior to deliver.		
22.11.	Primary indicating elements shall not be resettable to zero during a delivery. 🛛 Yes 🗌 No 🗌 N/A		

LMD Checklist, Checklists and Test Procedures for Specific Criteria for LPG LMDs:

Page LMD-64: Modify Code Reference S.1.4.2. Return to Zero as follows:

Code Reference: S.1.4.2. Return to Zero

The primary indicating element on any retail device shall be returnable to zero before a delivery. However, unless the retail device is a retail motor fuel device (or a stationary retail device), the recording element need not be returnable to zero before a delivery. Consequently, a vehicle-mounted Liquefied Petroleum Gas retail meter is not required to have a recording element that is returnable to zero before a delivery. Primary indicating elements shall not be resettable to zero during a delivery.			
	Is the device equipped with a recording element?	Yes No N/A	
27.14.	The primary indicating element shall be capable of being reset to zero before a delivery.	Yes No N/A	
27.15.	If the device is a retail motor fuel device and includes a printer, it shall be possible to reset the printer to zero before a delivery.	Yes No N/A	
	Indicating and recording elements shall not go beyond their correct zero position.	Yes No N/A	

27.17. <u>Primary indicating elements shall not be resettable to zero during a delivery.</u> Yes No N/A

B. LMD Code Paragraph S.1.6.10. Automatic Timeout for Pay-at-Pump RMFDs (S&T 330-2)

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted a new requirement as shown below for RMFDs which are activated by payment at the pump. The new paragraph requires a transaction to time out if the device is not activated within a specified period of time.

S.1.6.10. Automatic Timeout – Pay-At-Pump Retail Motor-Fuel Devices. – Once a device has been authorized, it must de-authorize within two minutes if not activated. Re-authorization of the device must

☐ Yes ☐ No ☐ N/A ☐ Yes ☐ No ☐ N/A

Yes No N/A

Yes No N/A

Yes No N/A

be performed before any product can be dispensed. If the time limit to de-authorize the device is programmable, it shall not accept an entry greater than two minutes.

[Nonretroactive as of January 1, 2017] (Added 2016)

Liquid-Measuring Devices Checklist, Additional Checklists and Test Procedures for Card-Activated RMFDs:

Page LMD-79: Modify Code Reference G-S.2. as follows:

Code Reference: G-S.2. Facilitation of Fraud

There is great concern regarding the potential for accidental or intentional fraud when card-activated systems are used in service stations, especially because bank-card-activated systems give direct access to bank accounts.

A card-activated system shall authorize the dispensing of product for not more than **three<u>two</u>** minutes of the time between authorization and "handle on" at the dispenser. <u>Additionally, once a device has been authorized, it must de-authorize within</u> <u>two minutes if not activated.</u> It shall properly record transactions on the appropriate card account.

When a card-activated system is subjected to power loss of greater than 10 seconds, the dispenser shall deauthorize. Because systems may be installed with separate power lines to the console, card reader, and dispenser, to different parts of the system should be tested with power failures to evaluate the potential for accidental or intentional errors. The appropriate device response depends upon when the power loss occurs during the delivery sequence.

38.3.	The dispenser must de-authorize in not more than threetwo minutes if the pump	Yes No N/A
	"handle" is not turned on.	

38.4.	The dispenser must	de-authorize in not more	than two minutes if not activated.

- 38.5. If the time limit to **deactivatedeauthorize** a dispenser is programmable, it shall not accept an entry greater than **threetwo** minutes.
- 38.6. When a power loss greater than 10 seconds occurs after the pump "handle" is on, the dispenser must de-authorize.
- 38.7. When there is a loss of power, but the pump "handle" is not on, the dispenser must de-authorize in not more than three minutes.

Liquid-Measuring Devices Checklist, Additional Checklists and Test Procedures for Card-Activated RMFDs:

Page LMD-80: Modify Section 39. Test Methods as follows:

39. Test Methods

- 39.1. Authorize the dispenser and, with the pump "handle" on, interrupt power to any part (or all) of the system. The pump should de-authorize immediately. Specifically:
 - 39.1.1. Authorize with a card and turn the "handle" on. Power down briefly then restore power. Try to dispense product, the dispenser must not dispense since the power failure should have de-authorized the dispenser.
- 39.2. Authorize the dispenser using a card (leaving handle off), wait more than **three<u>two</u>** minutes, and try to start the dispenser. It should not start because the authorization should have timed out. Specifically:

Yes No N/A

Yes No N/A

39.2.1.	Authorize with a card, but do not turn the "handle" on. Power down for more than threetwo minutes, and then restore power. Try to dispense product, the dispenser should have "timed-out" and not dispense.	Yes No N/A
	Authorize and dispense with card #1. Allow the system to time out and de- authorize (if it does.) Do not turn off the "handle." Authorize and dispense with card #2. The transactions shall be properly recorded for each card.	Yes No N/A
For Multi-I	Hose Dispensers:	
 39.2.8.	Authorize a dispenser with card #1, but do not turn the dispenser "handle" on. Try to authorize the same dispenser with card #2, it should not be accepted until after the <u>threetwo-</u> minute time-out.	Yes No N/A

The Sector is also asked to consider modifying Section 54 of the LMD Checklist, which includes a corresponding interpretation of G-S.2. Although the change adopted to the LMD Code does not appear in the Hydrogen Measuring Devices Code, it seems the same logic would apply with regard to interpreting G-S.2.

Liquid-Measuring Devices Checklist, Additional Checklists and Test Procedures for Hydrogen Gas-Measuring Devices:

Page LMD-101: Modify Section 54. Card-Activated Hydrogen Gas-Measuring Devices

Code Reference: G-S.2. Facilitation of Fraud

There is great concern regarding the potential for accidental or intentional fraud when card-activated systems are used in service stations, especially because bank-card-activated systems give direct access to bank accounts. The following criteria and test procedures apply to card-activated retail vehicle fuel dispensers.

A card-activated system shall authorize the dispensing of product for not more than **three<u>two</u>** minutes of the time between authorization and "control" on at the dispenser. It shall properly record transactions on the appropriate card account.

When a card-activated system is subjected to power loss of greater than 10 seconds, the dispenser shall deauthorize. Because systems may be installed with separate power lines to the console, card reader, and dispenser, the different parts of the system should be tested with power failures to evaluate the potential for accidental or intentional errors. The appropriate device response depends upon when the power loss occurs during the delivery sequence.

Note: The term "control" generically refers to the handle, flapper, start button, on/off switch, or other mechanism used to activate or deactivate the dispenser.

- 54.1. The dispenser must de-authorize in not more than **three<u>two</u>** minutes if the pump "control" is not turned on.
- 54.2. If the time limit to deactivate a dispenser is programmable, it shall not accept an entry greater than **threetwo** minutes.

		55.1.1.	Authorize with a card and turn the "control" on. Power down briefly, then restore power. Try to dispense product: the dispenser must not dispense because the power failure should have de-authorized the dispenser.	Yes No N/A		
	55.2	minutes	ze the dispenser using a card (leaving control off); wait more than threetwo , and try to start the dispenser. It should not start because the authorization have timed out.			
		55.2.1.	Authorize with a card, but do not turn the "control" on. Power down for more than three<u>two</u> minutes, and then restore power. Try to dispense product; the dispenser should have "timed-out" and not dispense.	Yes No N/A		
		55.2.2.	Authorize and dispense with card #1. Allow the system to time out and de- authorize (if it does). Do not turn off the "control." Authorize and dispense with card #2. The transactions shall be properly recorded for each card.	Yes No N/A		
		55.2.3.	Authorize with card #1. Turn the "control" on, then off. Authorize with card #2. Dispense product and complete the delivery. Check the printed receipt to verify that the delivery has been properly charged to card #2	Yes No N/A		
		55.2.4.	Turn the dispenser "control" on, and use a card to authorize the dispenser. Turn the "control" off. After a period of 15 seconds, turn the "control" on. Try to deliver product; the dispenser must not dispense.	Yes No N/A		
		55.2.5.	Authorize with card #1 (do not turn the "control" on) and interrupt power for at least 10 seconds. This should de-authorize the dispenser. Resupply power; turn the "control" on; try to dispense. The dispenser shall not deliver product.	Yes No N/A		
		55.2.6.	Authorize with card #1 (turn the "control" on) and interrupt power for at least 10 seconds. This should de-authorize the dispenser. Resupply power; turn the "control" on; try to dispense. The dispenser shall not deliver product.	Yes No N/A		
	Note: This	s test is no	ot required if the device under test complies with paragraph 10.1.			
		55.2.7.	Authorize a dispenser with card #1, but do not turn the dispenser "control" on. Try to authorize the same dispenser with card #2; it should not be accepted until after the 3 two-minute time-out.	Yes No N/A		
	55.3	is in the	t to override or confuse the card system by varying the length of time the card slot, (e.g., vary the "swipe" times) and pushing all other keys on the keypad each step of the authorization process.	Yes No N/A		

C. LMD & VTM Codes - Verification of Linearization Factors (S&T 330-3 and S&T 331-4)

Background: At its 2016 Annual Meeting, the NCWM adopted the following changes to the LMD Code and the VTM Code to add a test note pertaining to the testing of metering systems using linearization factors. A corresponding user requirement was added to each code to describe the user's responsibilities when making adjustments to systems with these capabilities.

LMD Code:

N.4.5. Verification of Linearization Factors. - All enabled linearization factors shall be verified. The verification of enabled linearization factors shall be done through physical testing, or a combination of physical testing and empirical analysis at the discretion of the official with statutory authority.

VTM Code:

N.4.6. Verification of Linearization Factors. - All enabled linearization factors shall be verified. The verification of enabled linearization factors shall be done through physical testing, or a combination of physical testing and empirical analysis, at the discretion of the official with statutory authority.

The submitter of these items also worked with a group of experts in the community to develop a document providing guidance on conducting an empirical analysis and presented the document to the S&T Committee for consideration. A copy of this document is included in Appendix A. Guidance on Empirical Analysis. Comments received suggested getting additional input from the community on the guidance document, including input from the Measuring Sector, and providing the final document to NIST for incorporation in metering Examination Procedure Outlines as appropriate.

Recommendation: The Sector is asked to discuss whether or not additional criteria is needed for addition to Pub 14 with regard to the evaluation of systems including linearization factors, possibly in the Field Evaluation and Permanence Testing for Metering Sections of the LMD Checklist. Presently the only references in the checklist with regard to linearization are a reference to the inclusion of multi-point calibration capability as a feature on a CC where applicable (See Technical Policy Section A. Type Evaluation Test Location, Installations Criteria, and Certificate of Conformance) and Technical Policy Section G. Range of Data Points (see below).

G. Range of Data Points

The number and types of tests to be run on devices covered under this checklist are specified in the Checklist and Test Procedures section and the Field Evaluation and Permanence Tests for Metering Systems section of this checklist. However, if the NTEP laboratory feels that there is a performance or other *NIST Handbook 44* related problem and provides reasons to support this belief, the laboratory is given the latitude to require additional testing.

A measuring element may use factory-established linearization curves to establish the minimum flow range (5:1, 10:1, or as required), providing the linearization programming is installed during manufacturing and the programming cannot be altered after leaving the factory.

Auxiliary equipment (e.g., indicator or register) with programmable multi-point calibration that alters the output signal from the measuring element to extend the flow range of the system beyond the measuring element's required minimum flow range may be used and the auxiliary device's multi-point calibration will be noted on the Certificate of Conformance and must be marked on the meter.

The Sector is also asked to review the guidance document "Guidance on Empirical Analysis" and provide input on its contents.

D. Table S.2.2. Categories of Sealing and Methods of Sealing (S&T 331-2; 332-4; 334-1; 335-1; 337-1; 338-1; 339-1) – VTM, LPG, Cryogenic LMD, Milk Meters, MFM, CO2, and Hydrogen Gas Metering Codes

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted changes to the requirements for event loggers in the VTM, LPG, Cryogenic LMD, Milk Meters, MFM, CO2, and Hydrogen Gas Metering Codes. For systems requiring the use of an event logger, the system may offer an electronic copy of the log in addition to the required hard copy. This does not replace the need for such systems to provide for a hard copy, but recognizes that an electronic copy may also be provided.

The following shows the changes that were adopted to Tables S.2.2. of the VTM Code. Similar changes were made to the other codes referenced; in the interest of brevity, these changes are not shown below, but can be viewed in the Committee's 2016 Interim Report found in NCWM Publication 16.

Recommendation: The Sector is asked recommend changes to the LMD Checklist in Publication 14 checklists as outlined in the tables below to reflect the new paragraph:

Table S.2.2. Categories of Device and Methods of Sealing		
Categories of Device	Methods of Sealing	
<i>Category 1:</i> No remote configuration capability.	Seal by physical seal or two event counters: one for calibration parameters and one for configuration parameters.	
Category 2: Remote configuration capability, but access is controlled by physical hardware. The device shall clearly indicate that it is in the remote configuration mode and record such message if capable of printing in this mode or shall not operate while in this mode.	The hardware enabling access for remote communication must be on-site. The hardware must be sealed using a physical seal or an event counter for calibration parameters and an event counter for configuration parameters. The event counters may be located either at the individual measuring device or at the system controller; however, an adequate number of counters must be provided to monitor the calibration and configuration parameters of the individual devices at a location. If the counters are located in the system controller rather than at the individual device, means must be provided to generate a hard copy of the information through an on-site device.	
Category 3: Remote configuration capability access may be unlimited or controlled through a software switch (e.g., password). The device shall clearly indicate that it is in the remote	An event logger is required in the device; it must include an event counter (000 to 999), the parameter ID, the date and time of the change, and the new value of the parameter. A printed copy of the information must be available <u>on demand</u> through the device or through another on-site device. <u>The information may also be</u> available electronically. The avent logger shall have a	
mfiguration mode and record such message if capable of rinting in this mode or shall not operate while in this ode.	available electronically. The event logger shall have a capacity to retain records equal to 10 times the number of sealable parameters in the device, but not more than 1000 records are required. (Note: Does not require 1000 changes to be stored for each parameter.)	

[Nonretroactive as of January 1, 1995] (Table Added 2006) (Amended 20XX) **Recommendation:** As a result of the changes outlined above, the Sector is asked recommend changes to the following NCWM Publication 14 checklists as outlined in the tables below:

- Liquid-Measuring Devices Checklist;
- Hydrocarbon Gas-Vapor Measuring Devices Checklist;
- Cryogenic Liquid-Measuring Devices Checklist;

Liquid-Measuring Devices Checklist: Page LMD-28: Modify Section 2.40 as follows:						
<u>rage LiviD-23:</u> Modify Section 2.40 as follows. Category 3 Devices (Devices with Unlimited Remote Configuration Capability): Category 3 devices have virtually unlimited access to sealable parameters or access is controlled though a password.						
<u>32.20.</u>	 For devices manufactured after January 1, 2001, the device must either: 32.20.1 Clearly indicate when it is in the remote configuration mode. OR 32.20.2 The device shall not operate while in the remote configuration mode. 	Yes No N/A Yes No N/A				
<u>32.21.</u> <u>32.22.</u>	The device is equipped with an event logger. The event logger automatically retains the identification of the parameter changed, the date and time of the change, and the new value of the parameter.	☐ Yes ☐ No ☐ N/A ☐ Yes ☐ No ☐ N/A				
<u>32.23.</u> <u>32.24.</u>	Event counters are non-resettable and have a capacity of at least 000 to 999. The system is designed to attach a printer, which can print the contents of the audit trail. <u>In addition to the hard copy, the information may also be made available electronically.</u>	Yes No N/A Yes No N/A				
<u>32.25.</u>	The audit trail information must be capable of being retained in memory for at least 30 days while the device is without power or must be retained in nonvolatile memory.	Yes No N/A				
<u>32.26.</u>	The event logger must have a capacity to retain records equal to ten times the number of sealable parameters in the device, but not more than 1000 records are required.	Yes No N/A				
<u>32.27.</u>	The event logger drops the oldest event when the memory capacity is full and a new entry is saved.	Yes No N/A				
<u>32.28.</u>	Describe the method used to seal the device or access the audit trail information:

E. LPG Code Updates - S.1.4.3. Power Loss, etc. (S&T 332-2)

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted numerous changes to the LPG & NH₃ Code to align requirements for retail motor-fuel applications with those in the LMD Code. In the interest of brevity, the Sector is referred to the S&T Committee's Interim Report beginning on page S&T-28.

Recommendation: The Sector is asked to consider recommending the following changes to the LMD Checklist to reflect the changes to the LPG & NH₃ Code outlined in the Background above.

LMD Checklist, Checklist and Test Procedures for LPG LMDs:

Page LMD-64: Modify Code Reference S.14.1. Indication of Delivery as follows.

Code Reference: S.1.4.1. Indication of Delivery

- 38.3 A retail device shall automatically show <u>on its face the its</u> initial zero condition and Yes N/A the amountquantity delivered up to normal capacity of the device.
- **38.4** <u>The measurement, indication of delivered quantity, and the indication of total</u> Yes No N/A <u>sales price shall be inhibited until the fueling position reaches conditions</u> <u>necessary to ensure that the delivery starts at zero.</u>

LMD Checklist, Checklist and Test Procedures for LPG LMDs:

Page LMD-65: Modify Code Reference S.1.5.1. Display of Unit Price and Product Identity.

Code Reference: S.1.5.1. Display of Unit Price and Product Identity

A computing or money-operated device shall have a means for displaying on itseach face the unit price at which it is set to compute or deliver, expressed as a decimal value in dollars. Means shall be provided to display on each side of the devicepost the identity of the product grade, blend, or mixture of product being dispensed.

Except for dispensers intended to be limited for use exclusively for fleet sales and other price contract sales, all of the unit prices at which that product is offered for sale shall meet the following conditions:

- (1) For a system that applies a discount prior to the delivery, all unit prices shall be displayed or shall be capable of being displayed on the dispenser through a deliberate action of the purchaser prior to the delivery of the product. It is not necessary that all of the unit prices be simultaneously displayed prior to the delivery of the product.
- (2) For a system that offers post-delivery discounts on fuel sales, display of pre-delivery unit price information is exempt from (1) above, provided the system complies with S.1.5.5. Recorded Representations for Transactions Where a Post-Delivery Discount(s) is Provided.

Note: When a product is offered at more than one unit price, display of the unit price information may be through the deliberate action of the customer: 1) using controls on the device; 2) through the customer's use of personal or vehicle-mounted electronic equipment communicating with the system; or 3) verbal instructions by the customer.

28.1. Means shall be provided to display the unit price on **the<u>each</u>** face of the device.

28.2.	The unit price shall be expressed in dollars and decimals of dollars using a dollar sign.	Yes No N/A
	A common fraction shall not appear in the unit price, (e.g., \$1.299 not \$1.29 9/10.)	

28.3.	The unit price cannot be changed while the dispenser is activated.	Yes No N/A
20.5.	The unit price cannot be changed while the dispenser is derivated.	
28.4.	Means shall be provided to postdisplay on eachthe side of the device the product	Yes No N/A
	identity, grade, brand, blend, or mixture of product being dispensed.	
28.5.	If a grade, brand, blend, or mixture is offered for sale at more than one unit price	
	from a device, then all of the unit prices at which that product is offered for sale:	
	28.5.1. Shall be displayed prior to the delivery of the product. OR	Yes No N/A
	28.5.2. Shall be capable of being displayed on the dispenser through the	Yes No N/A
	deliberate action of the purchaser using: 1) controls on the device; 2)	
	personal or vehicle mounted electronic equipment communicating with	
	the system; or 3) verbal instructions	
<u>-</u>		
Note: It	is not necessary to simultaneously display all of the unit prices for all grades, brands,	
blends,	or mixtures provided the dispenser complies with this section, S.1.5.1.	
Note: H	or a system that offers post-delivery discounts on fuel sales, display of pre-delivery	
	ce information is exempt from 28.5, provided the system complies with S.1.5.5.	
Record	ed Representations for Transactions Where a Post-Delivery Discount(s) is Provided.	
28.6.	The unit prices for each product and price level may be:	Yes No N/A
	28.6.1. <u>Displayed simultaneously for all products.</u>	☐ Yes ☐ No ☐ N/A
	28.6.2. Displayed simultaneously for each product separately.; or	
	28.6.3. Displayed individually in a unit-price display only if controls permit the	Yes No N/A
	customer to sequence the display through the unit prices for each and	
	every product.	
Note: S	ection 28.5 shall not apply to fleet sales, other contract sales, or truck refueling sales	
<u>(e.g. sal</u>	es from dispensers used to refuel trucks.)	

LMD Checklist, Checklist and Test Procedures for LPG LMDs:

Page LMD-63: Modify Code Reference G-S.5.2.2. Digital Indications and Representations to reference new LPG & NH3 Code Paragraph S.1.5.3. Agreement Between Indications. Note that this language is based on that in the LMD Checklist beginning on page LMD-33.

Code References: G-S.5.2.2. Digital Indication and Representation; S.1.5.3. Agreement Between Indications

Basic operating requirements for devices are that:

- All digital values of like value in a system shall agree.
- A digital value shall agree with its analog representation to the nearest minimum graduation.
- Digital values shall round off to the nearest digital division that can be indicated or recorded.
- When a digital zero display is provided, the zero indication shall consist of at least one digit to the left and all digits to the right of the decimal point.

Due to limitations of some of the technologies used to transmit information from dispensers to service station consoles, some exceptions to these rules have been given to the indications on retail motor fuel dispensers and service station consoles. Exact agreement of digital quantity values is not required if only total price information is sent from the dispenser to the console. In these cases, the console calculates the quantity from the unit price set in the console. Consequently, the quantity indicated on the console may not agree exactly with the quantity indicated on the dispenser. However, if the console prints a customer receipt, then the quantity times unit price must equal the total price on both the dispenser and the printed receipt. In 2016, provisions were added to the LPG & NH_3 Code to allow systems to apply post-delivery discounts. In cases where a system applies a post-delivery discount(s) to a fuel's unit price through an auxiliary element, the exception mentioned above does not apply and, therefore, the total volume quantity of the delivery shall be in agreement between all elements in the system. *See LPG & NH_3 Code S.1.5.3*. The money value indication prior to the application of any post-delivery discount for dispensers and consoles must agree for all installations.

For those systems consisting of a console and dispensers and equipped with pre-set volume, the dispenser must deliver at least the pre-set volume; it cannot deliver less. For example, if the console sends only the money equivalent of the pre-set volume to the dispenser, the dispenser shall deliver at least the pre-set volume. It may not stop at the first quantity amount that results in mathematical agreement with the money value equivalent of the pre-set volume if the quantity indication is less than the pre-set volume. Similarly, if a money value is pre-set, the dispenser is not properly designed if it always stops at the lowest quantity value that provides mathematical agreement with the pre-set money value.

Tests for agreement of digital values shall be performed in the post pay, prepay money, and pre-set volume modes. Agreement should be checked at several unit prices including the maximum unit price and with the dispenser operating at its maximum flow rate.

Code Reference: G-S.5.2.2. Digital Indication and Representation

Basic operating requirements:

21.	All digital values of like value in a system shall agree.	Yes No N/A		
22.	A digital value shall agree with its analog representation to the nearest minimum graduation.	<mark>∃Yes ∃No ∃N/A</mark>		
23.	Digital values shall round off to the nearest digital division that can be indicated or recorded.	Yes No N/A		
<u>24.</u>	When a digital zero display is provided, the zero indication shall consist of at least one digit to the left and all digits to the right of the decimal point.	<mark>∃Yes ∃No ∃N/A</mark>		
Agreement of ind	ications shall be checked for several deliveries. Check the totalizer fo	F		
accuracy and agreement with individual deliveries and with other totalizers in the system.				
Indications may disagree if digital indicators receive quantity pulses from a non-resettable				
pulsar.				

	<u>32.20.</u> All digital values of like values in a system agree with one another.	Yes No N/A
27.3	Digital values coincide with associated analog values to the nearest minimum graduation.	Yes No N/A
27.4	Digital values "round off" to the nearest minimum unit that can be indicated or recorded.	Yes No N/A
27.5	The device totalizer shall agree with the total of the individual deliveries and with other totalizers in the system.	Yes No N/A
27.6	All total sale money value indications in a computing system are primary indications and must agree prior to the application of any post-delivery discount.	Yes No N/A
27.7	Digital volume indications in a non-computing system must agree or "round off" to the nearest minimum unit that can be indicated or recorded.	Yes No N/A
27.8	Manual quantity entries in invoice billing systems must be identified as such.	Yes No N/A
<u>For sta</u>	tionary retail devices:	
27.9	When delivery from a stationary retail computing device is based upon a pre-set volume, the quantity indicated on the dispenser and any auxiliary device must be equal to or greater than the pre-set volume and the dispenser and remote console must comply with G-S.5.5. Money Values, Mathematical Agreement.	Yes No N/A
27.10	The quantity, unit price, and total price indications on the console shall be in mathematical agreement prior to the application of any post-delivery discount.	Yes No N/A
27.11	The following applies when a quantity value indicated or recorded by an auxiliary element such as a console, ticket printer, or remote customer display, is a derived or computed value based on data received from a retail motor fuel dispenser. When a system applies a post-delivery discount(s) to a fuel's unit price through an auxiliary element, the total volume of the delivery shall be in agreement between all elements in the system.	Yes No N/A
	27.11.1. In systems that do not apply a post-delivery discount the quantity values indicated or recorded on a console, electronic cash register, or other auxiliary indicating or recording element may differ, however, for all systems:	Yes No N/A
	27.11.1.1. All indicated or recorded total money values for an individual sale shall agree. AND	Yes No N/A
	27.11.1.2. The indicated or recorded quantity, unit price, and total sales price values shall be in mathematical agreement to the closest cent (e.g., within each element, the values indicated or recorded must meet the formula [quantity x unit price = total sales price] to the closest cent.)	Yes No N/A
	Examples: \$1.5549 rounds to \$1.55	
	\$1.5551 rounds to \$1.56 \$1.5550 rounds to either \$1.55 or \$1.56	
27.12	The printed ticket and dispenser must comply with G.S.5.5. Money Values, Mathematical Agreement to the nearest cent (unit price x volume = total sale ± 0.5 cent.)	Yes No N/A
27.13	Digital values agree with their associated analog value to the nearest minimum graduation.	Yes No N/A

Page LMD-66: Modify Code Reference S.1.5.3. Recorded Representations, Point of Sale Systems and add a new paragraph reference as follows to reflect new paragraphs S.1.5.4. Recorded Representations and S.1.5.5. Recorded Representations for Transactions Where a Post-Delivery Discount(s) is Provided.			
Code Reference: S.1.5.3. Recorded Representations, Point-of-Sale Systems			
28.13. A printed receipt providing the following information is available through a built- in or separate recording element for all transactions conducted with point-of-sale systems or devices activated by debit cards, credit cards, and/or cash. This does not apply to fleet sales and other price contract sales.			
28.13.1. The total volume of the delivery printed.			
28.13.2. The unit price printed.	Yes No N/A		
28.13.3. The total computed price printed.	Yes No N/A		
28.13.4. The product identity by name. symbol, abbreviation, or code number.	<mark>☐ Yes ☐ No ☐ N/A</mark>		
Code References: S.1.5.4. Recorded Representations; and S.1.5.5. Recorded Representations for Delivery Discount(s) is Provided.	r Transaction Where a Post-		
Except for fleet sales and other price contract sales, for transactions conducted with point-of-sale systems or devices activated by credit cards, debit cards, or cash, a printed receipt containing information about the transaction shall be available to the customer as outlined in the following items. A printed receipt must always be available to the customer upon request and printing of the receipt may be initiated at the option of the customer. In addition, some systems may be equipped with the capability to issue an electronic receipt; for those systems, the customer may be given the option to receive the receipt electronically (e.g., via cell phone, computer, etc.). See also NCWM Publication 14, Code Reference: G-S.5.6. Recorded Representations. Device capabilities: Printed Receipt Electronic Receipt			
28.13. The system must provide a receipt to be made available to the customer at the completion of the transaction through either:			
28.13.1. a built-in recording element OR	Yes No N/A		
28.13.2, a separate recording element that is part of the system	Yes No N/A		
28.14. Except for transactions where a post-delivery discount is provided, the customer receipt must contain the following information:	Yes No N/A		
28.14.1. The total volume of the delivery;	Yes No N/A		
28.14.2. The unit price;	Yes No N/A		
28.14.3. The total computed price; and	Yes No N/A		
28.14.4. The product identity by name, symbol, abbreviation, or code number.	Yes No N/A		
28.15. Where a post-delivery discount(s) is applied, the sales receipt must provide:	Yes No N/A		
28.14.1. the product identity by name, symbol, abbreviation, or code number;	Yes No N/A		
28.14.1 the total quantity, unit price, and total computed price that were displayed on the dispenser at the end of the delivery prior to any post- delivery discount(s);	Yes No N/A		
28.14.1. an itemization of the post-delivery discounts to the unit price; and	Yes No N/A		
28.14.1. the final total price of each fuel sale after all post-delivery discounts are applied.	Yes No N/A		

LMD Checklist, Checklist and Test Procedures for LPG LMDs:
Add new code references to include a provision for new LPG & NH3 Code Paragraphs S.1.5.6. Transaction Information, Power Loss and S.1.5.7. Totalizers for Retail Motor-Fuel Dispensers.
Code Reference: S.1.5.6. Provisions for Power Loss
Even if power fails during a delivery, it is still necessary to correctly complete all transactions in progress at the time of the power failure. Quantity and total sales price information shall be recallable for at least 15 minutes after the power failure. The information may be recalled at the dispenser or at the console if the console indications are accessible to the customer. Operator information, such as fuel and money value totals, shall be retained in memory during a power failure. The operator information is not required to be recallable during the power failure, but shall be recallable after power is restored. Test to determine if the indications are accurate when the delivery is continued after a power failure.
<u>Note: For remote controllers (e.g., cash register, console, etc.) which have the capability to retain information pertaining to a transaction (e.g., stacked completed sales.) If the information cannot be recalled at the dispenser following a power outage, means (e.g., uninterruptible power supply or other means) must be provided to enable the transaction information to be recalled and verified for at least 15 minutes following a power outage.</u>
28.16. The quantity and total sales price shall be recallable for 15 minutes after the power Yes No N/A failure.
28.17. The quantity and total sales price values shall be correct if the power fails between Yes No N/A deliveries.
28.18. The quantity and total sales price values shall be correct if the delivery is continued Yes No N/A after a power failure.
28.19. The operator's information shall be retained in memory during a power failure. Yes No N/A
28.20. Remote controllers which stack completed sales must have a means to enable the ransaction information to be recalled and verified for at least 15 minutes. Yes No N/A
In addition to the above criteria for power, loss, the following applies to evaluations of Cash-Activated LPG Retail Motor- Fuel Dispensers:
In addition to the above checklist complete those portions of Section 15. of LMD Checklist, Checklists and Test
Procedures for Cash-Activated Retail Motor-Fuel Dispensers which relate to provisions for power loss.
Code Reference: S.1.5.7. Totalizers for Retail Motor-Fuel Dispensers.
28.21. Retail motor fuel dispensers shall be equipped with a non-resettable totalizer for the quantity delivered through the metering device.

LMD Checklist, Checklist and Test Procedures for LPG LMDs:

Add a new code reference to reflect the addition of new paragraph S.2.5. Zero-Set-Back Interlock for Stationary Retail Motor-Fuel

D. '		
Devices. Renumb	per subsequent code references to reflect corresponding changes to those paragraphs in	Handbook 44.
Code Refe	rence: S.2.5. Zero-Set-Back Interlock	
	et-back interlock on a dispenser is critical to prevent fraudulent practices. A reta	
	device shall have an effective automatic interlock such that once the dispenser shut	
	ot be restarted without resetting the indicating element to zero. This requirements to the recording element if one is present. The dispenser shall be designed so that	
	g lever must be in the shut-off position and the interlock engaged before the	
discharge 1	nozzle can be returned to its designed hanging position. If a single pump supplie	<u>es</u>
	one dispenser, then each dispenser shall have an automatic control valve that	
<u>prevents p</u> zero.	roduct from being delivered by a dispenser until its indications have been set t	<u>.0</u>
<u>zero.</u>		
	After the device is turned off by moving the lever that stops the flow, a subsequent delivery shall be prevented until the indicators (and recording element if present) have returned to their correct zero positions.	Yes No N/A
	The starting lever shall be in shut off position and zero-set-back interlock	□ Yes □ No □ N/A
	engaged before the nozzle can be returned to its designed hanging position. That	
	is any position where the tip of the nozzle is placed in its designed receptacle and	
	the lock can be inserted.	
	If more than one dispenser is connected to a single pump, an automatic control	Yes No N/A
	valve shall prevent fuel from being delivered until the indicating elements have	
	been returned to their correct zero position and engaged.	
	The use of the interlock shall be effective under all conditions when any control on the console, except a system emergency shut-off, is operating and after any	Yes No N/A
	momentary power failure.	
Renumber existi	ng code references as follows:	
Code Ref	ference: S.2. <u>56</u> . Thermometer Well	
29. 5.<u>6.</u>	For test purposes, means shall be provided for inserting a thermometer in the meter chamber or immediately adjacent to the meter.	
Code Ref	ference: S.2. 6 7. Automatic Temperature Compensator	
29. 6. 7.	An Liquefied Petroleum Gas meter may be equipped with an automatic temperature	
comper	isator. If so equipped, the meter shall be provided with a means for automatically	
	ng the indication and registration of the measured volume of the product to the volume	
at 15 °C	C (60 °F.)	
Code Ref	ference: S.2.67.1. Provision for Deactivation	
29. 7.<u>8.</u>		
	compensated to 15 °C (60 °F) provisions must be made to facilitate the deactivation	
	of the automatic temperature-compensating mechanism so that the meter will	
	indicate and/or record the uncompensated volume.	
Code Ref	ference: S.2.67.2. Provision for Sealing	
29. 8. 9.	Automatic temperature compensators must provide for applying security seals to	
_	prevent undetected adjustment or disconnection of the compensating system.	

F. LPG Code – S.2.1. Vapor Elimination (S&T 332-3)

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted the following changes to the requirements for vent lines on vapor eliminators in the LPG & NH_3 Code (and also adopted similar changes in the CO₂ LMD Code) which emphasizes the need for the lines to be made of material that is "non-collapsible."

S.2.1. Vapor Elimination. -

(a) A device shall be equipped with an effective <u>automatic</u> vapor eliminator or other effective means to prevent the passage of vapor through the meter.

(b) Vent lines from the vapor eliminator shall be made of appropriate non-collapsible material.

(Amended 20XX)

Recommendation: The Sector is asked to consider recommending the following changes to Code Reference 2.21. of the Pub 14 LMD Checklist which references vapor eliminator vent lines for LPG & NH_3 LMDs. Note that the checklist does not currently include specific requirements for CO_2 LMDs. Additionally, the current text refers to the vent line as a "vapor return line," which generally connotes a different type of line; consequently, the recommendation includes proposed changes to correct this reference.

Since there seems to be general agreement on the criteria for a suitable vent line, the Sector may wish to consider modifying this reference to make a more generic reference to requirements for vent lines on vapor eliminators rather than for LPG & NH₃ systems only. This would eliminate the need to include specific requirements in multiple places in the various measuring checklists. For example, although similar changes were made to a corresponding paragraph in the CO_2 code, the current LMD checklist includes no reference to this requirement. Additionally, there are other sections of the checklist (such as VTMs and Loading-Rack Meters) where similar requirements appear, but the language doesn't currently align with this language.

LMD Checklist:

Page LMD-32, 2016 Edition: Modify Code Reference S.2.1. as follows:

56. Measuring Elements

Code Reference: S.2.1. Vapor Elimination (LPG S.2.1.)

If air enters through a metering system or the product changes into vapor as it passes through the system, then it must be equipped with a vapor eliminator to remove the air or vapor before it passes through the meter. To prevent the **vapor return vapor** eliminator vent lines from being pinched closed and re-opened without being detected, the vent lines shall be made of metal tubing or other **rigid material appropriate non-collapsible material**. If the system is designed such that air or vapor will not enter the system, then a vapor eliminator is not required. One example is when a product is being pumped from the bottom of a tank and a low-level detector in the tank shuts off the pump before the liquid level gets to the point where air could enter the system. Code Reference: S.1.5.1. Symmetry

29.5.1.1.1.1. The metering system is equipped with an effective vapor eliminator.

Yes	No	N/A

29.5.1.1.1.2. The vent lines are made of metal tubing or Yes No N/A some other rigid material appropriate non-collapsible material.

G. MFM Code – Natural Gas (S&T 337-2)

Background: At the 2016 NCWM Annual Meeting, the NCWM adopted multiple changes to the Mass Flow Meters Code to recognize the sale of liquefied natural gas through retail metering systems. Those changes are outlined in the table below.

Amend NIST Handbook 44 Appendix D to include the following new definition:

<u>diesel gallon equivalent (DGE). – Diesel gallon equivalent (DGE) means 6.384 pounds of compressed natural gas or 6.059 pounds of liquefied natural gas. [3.37]</u> (Added 2016)

Amend NIST Handbook 44 Appendix D definitions as follows:

gasoline gallon equivalent (GGE). – Gasoline gallon equivalent (GGE) means 5.660 pounds of <u>compressed</u> natural gas. [3.37] (Added 1994) (Amended 2016)

Delete the following NIST Handbook 44 Appendix D definition as shown:

gasoline liter equivalent (GLE). Gasoline liter equivalent (GLE) means 0.678 kilograms of <u>natural gas.[3.37]</u> (Added 1994)

Amend NIST Handbook 44 Mass Flow Meters Code paragraphs S.1.2., S.1.3.1.1., S.5.2., and UR.3.8. and add new paragraphs S.1.3.1.2., S.5.3., UR.3.1.1. and UR.3.1.2. as follows:

S.1.2. Compressed Natural Gas and Liquefied Natural Gas Dispensers. – Except for fleet sales and other price contract sales, a compressed <u>or liquefied</u> natural gas dispenser used to refuel vehicles shall be of the computing type and shall indicate the quantity, the unit price, and the total price of each delivery. The dispenser shall display the mass measured for each transaction either continuously on an external or internal display accessible during the inspection and test of the dispenser, or display the quantity in mass units by using controls on the device.

(Added 1994) (Amended 2016)

S.1.3. Units.

S.1.3.1.1. Compressed Natural Gas Used as an Engine Fuel. – When compressed natural gas is dispensed as an engine fuel, the delivered quantity shall be indicated in <u>"gasoline liter equivalent (GLE) units" or</u> "gasoline gallon equivalent (GGE) units" <u>or</u> <u>diesel gallon equivalent units (DGE), or in mass.</u> (Also see Appendix D definitions.) (Added 1994) (Amended 2016)

S.1.3.1.2. Liquefied Natural Gas Used as an Engine Fuel. – When liquefied natural gas is dispensed as an engine fuel, the delivered quantity shall be indicated in diesel gallon equivalent units (DGE) or in mass. (Also see definitions.) (Added 2016)

S.5.2. Marking of Gasoline Volume Equivalent Conversion Factors for Compressed <u>Natural Gas.</u> – A device dispensing compressed natural gas shall have either the statement <u>"1</u> <u>Gasoline Liter Equivalent (GLE) is Equal to 0.678 kg of Natural Gas" or</u> "1 Gasoline Gallon Equivalent (GGE) is Equal means 5.660 lb of <u>Compressed</u> Natural Gas" <u>or "1 Diesel Gallon</u> **Equivalent (DGE) means 6.384 lb of Compressed Natural Gas**" permanently and conspicuously marked on the face of the dispenser according to the method of sale used. (Added 1994)(Amended 2016)

S.5.3. Marking of Equivalent Conversion Factors for Liquefied Natural Gas. – A device dispensing liquefied natural gas shall have the statement "1 Diesel Gallon Equivalent (DGE) means 6.059 lb of Liquefied Natural Gas" permanently and conspicuously marked on the face of the dispenser according to the method of sale used. (Amended 2016)

S.6. Printer. – When an assembly is equipped with means for printing the measured quantity, the following conditions apply:

- (a) the scale interval shall be the same as that of the indicator;
- (b) the value of the printed quantity shall be the same value as the indicated quantity;

(c) <u>the printed quantity shall also include mass value if mass is not the indicated</u> <u>quantity; [Nonretroactive as of January 1, 2021]</u>

 $(\mathbf{e} \mathbf{d})$ a quantity for a delivery (other than an initial reference value) cannot be recorded until the measurement and delivery has been completed;

 $(\mathbf{d} \ \underline{\mathbf{e}})$ the printer is returned to zero when the resettable indicator is returned to zero; and

(e <u>f</u>) the printed values shall meet the requirements applicable to the indicated values. (Amended 2016)

UR.3.1.1. Marking of Equivalent Conversion Factors for Compressed Natural Gas. – A device dispensing compressed natural gas shall have either the statement "1 Gasoline Gallon Equivalent (GGE) means 5.660 lb of Compressed Natural Gas" or "1 Diesel Gallon Equivalent (DGE) means 6.384 lb of Compressed Natural Gas" permanently and conspicuously marked on the face of the dispenser according to the method of sale used. (Added 2016)

UR.3.1.2. Marking of Equivalent Conversion Factors for Liquefied Natural Gas. – A <u>device dispensing liquefied natural gas shall have the statement "1 Diesel Gallon</u> Equivalent (DGE) means 6.059 lb of Liquefied Natural Gas" permanently and <u>conspicuously marked on the face of the dispenser according to the method of sale used.</u> (Added 2016)

UR.3.8. Return of Product to Storage, Retail Compressed <u>and Liquefied</u> Natural Gas Dispensers. – Provisions at the site shall be made for returning product to storage or disposing of the product in a safe and timely manner during or following testing operations. Such provisions may include return lines, or cylinders adequate in size and number to permit this procedure.

(Added 1998) (Amended 2016)

Recommendation: The Sector is asked to consider recommending the following changes to the Pub 14 LMD Checklist to reflect the changes to the Mass Flow Meters Code outlined in the Background above.

LMD Checklist, Checklists and Test Procedures for Mass Flow Meters:

Page LMD-71:	Modify Code References S.1.2. and S.1.3.1.1. and add new code reference S.1.3.1.2. as	s follows:	
Code Refe	erence: S.1.2. Compressed Natural Gas <u>and Liquefied Natural Gas</u> Dispensers – Ma	ass Flow Meters	
<u>32.19.</u>	Except for fleet sales and other price contract sales, a compressed <u>or liquefied</u> natural gas dispenser used to refuel vehicles shall be of the computing type and shall indicate d the quantity, the unit price, and the total price of each delivery.	Yes No N/A

	(b) the value of the printed quantity shall be the same value as the indicated quantity, except that after January 1, 2021 the printed quantity shall also include mass value if mass is not the indicated quantity;	Yes No N/A
	(c) a quantity for a delivery (other than an initial reference value) cannot be recorded until the measurement and delivery has been completed;	Yes No N/A
	(d) the printer is returned to zero when the resettable indicator is returned to zero; and	Yes No N/A
	(e) the printed values shall meet the requirements applicable to the indicated values.	Yes No N/A

3. NCWM Publication 14, LMD Checklist, Laboratory/Field Evaluation and Permanence Tests for Metering Systems, Section B - Previously Evaluated Meters.

Source: Randy Moses, Wayne Fueling, LLC

Recommendation: The Sector is asked to consider recommending the following change to the Section B of the "Laboratory/Field Evaluation and Permanence Tests for Measuring Systems" of the Liquid-Measuring Devices Checklist in NCWM Publication 14.

Page LMD-108, 2016 Edition:

Liquid Measuring Devices – Laboratory / Field Evaluation and Permanence Tests for Metering Systems; Field Evaluation Test of Previously Evaluated Components in Retail Motor Fuel Dispensers Using Different Previously Evaluated Meters

Different Previously Evaluated Meter

Previously evaluated dispensers using a previously type evaluated meter and indicator (register) will <u>normally</u> be subject to an initial test <u>at the discretion of the testing lab</u>. Based on the test results of the initial test, National Type Evaluation Program (NTEP) may require a permanence test.

Non-metrological Changes

A technical administrative review shall be conducted to issue a new Certificate of Conformance (CC) or amend an existing CC for previously evaluated devices because of non metrological changes. Based on the results of the technical administrative review, NTEP may require additional tests.

Background: The proposed changes are recommended to allow the evaluating NTEP laboratory some discretion when looking at the approval requirements for adding tested meters to existing dispenser files. This refers to the requirement for an initial test as called out in Pub 14, Section B, on page LMD-108. In some cases, there may be no difference in model series of a manufacturer except for things like the sheet metal cabinet making such a test unnecessary.

4. Display of Unit Price in Tenths of a Cent.

Source: NTEP Measuring Labs via NTEP Director Jim Truex

Recommendation: The Sector is asked to consider the addition of a specific Handbook 44 code reference to the lead in paragraph to Pub 14, Liquid Measuring Device Checklist, Section 1.16. to read as follows:

"Code References: G-S.5.1. and G-S.5.2.2. Indicating and Recording Elements"

The Sector is also asked to consider recommending the addition of a new section **<u>1.22</u>**. to read as follows:

Page LMD-23, 2016 Edition:

Code References: G-S.5.1. and G-S.5.2.2. Indicating and Recording Elements

Several requirements of a general nature facilitate the reading and interpretation of displayed values. Each display for quantity or total price must be appropriate in design and have sufficient capacity for particular applications to be suitable for the application. For example, retail fuel dispensers capable of indicating to 99.999 liters or gallons or \$99.99 are appropriate for automobiles at today's prices, but that are unsuitable for fueling trucks where deliveries may regularly exceed 100 liters or gallons and \$100. Metering devices must be capable of indicating the maximum quantity and money values that can normally be expected in a particular application.

<u>32.20.</u>	The maximum money value and quantity ind the intended use.	ications and unit prices are appropriate for	Yes No N/A
	36.5.1.1.1.	1. The indications must be clear, definite, and accurate.	Yes No N/A
	36.5.1.1.1.2	2. The indications must be easily read under normal operating conditions.	Yes No N/A
	36.5.1.1.1.	3. Totalizer values must be accurate to the nearest minimum interval with decimal points displayed or subordinate digits adequately differentiated from others, if applicable.	Yes No N/A
	36.5.1.1.1.4	4. Symbols for decimal points shall clearly identify the decimal position. (Generally acceptable symbols are dots, small commas, or x.)	Yes No N/A
	36.5.1.1.1.	5. The zero indication must consist of at least the following minimum indications as appropriate:	Yes No N/A

36.5.1.1.1.5.1. One of digits to t point.	digit to the left and all Y the right of a decimal	es 🗌 No 🗌 N/A

	g., all decades to the \Box Y decimal point must be	es 🗌 No 🗌 N/A
36.5.1.1.1.6. Unit price values	s shall be displayed	
	the nearest 1 cent (\$	
	otor fuel dispensers	
	itted to display and	
	ree decimal places to	
the right of the de	ecimal point (\$0.001).	
*A fixed zero may appear after a decimal point on a receipt and/or console if	the system is unable to distinguis	h if the digit is fixed

or active.

Background: During an NTEP evaluation the evaluator was asked to accept a recording element and receipt where the unit price was indicated and printed out to four decimal places (example: \$3.6990). The NTEP Labs acknowledge that it is customary for dispensers to indicate unit price values to three decimal places but do not think it is appropriate for other devices, such as POS systems, registers for meters). Total price values need to be rounded to the nearest cent. The NTEP labs propose the following amendments to Pub 14.

5. NCWM Publication 14 Electronic Cash Registers Interfaced with Retail Motor-Fuel Dispensers Checklist – Change to Title.

Source: NTEP Measuring Labs via NTEP Director Jim Truex

Recommendation: The Sector is asked to consider recommending the following change to the title of the checklist and subsequent references to the checklist to read:

"Electronic Cash Register Interfaced with Retail Motor-Fuel Dispensers, <u>Console Controller and</u> <u>Point-of-Sale System Software</u> Checklists and Test Procedures"

Background: NTEP evaluators routinely use the ECR checklist when evaluating console controllers and POS system software. The labs are recommending that the title of the ECR section in Pub 14 and subsequent references be changed to indicate inclusion of controllers and software.

6. Manual Volume Entries – Delete Entry in NCWM Publication 14 Electronic Cash Registers Interfaced with Retail Motor-Fuel Dispensers Checklist.

Source: NTEP Measuring Labs via NTEP Director Jim Truex

Recommendation: The Sector is asked to consider recommending that Section 2.3. in the Checklist on Electronic Cash Registers Interfaced with Retail Motor-Fuel Dispensers be deleted as follows:

2.3. Manual volume entries are permitted. They must be clearly identified on the receipt as a manual entry by the terms "Manual Fuel Sale."

Note: All uppercase or a combination of upper and lower case letters are permitted provided the evaluating laboratory finds the resulting text to be clear and legible.

Background: NIST Handbook 44 does not support the use of manual volume entries. Unless the Sector can provide a reason for the allowance in Pub 14, the NTEP laboratories recommend removal of this section.

Additional Items as Time Allows:

If time permits, the NCWM S&T Committee and/or other groups would appreciate input from the Measuring Sector on the measuring-related issues that are outlined in the remaining agenda items below. A copy of any regional association modifications or positions will be provided to the Sector when these are made available by the regions.

7. S&T 2017 New Item – General Code - G-S.5.2.2. Digital Indication and Representation

Source: Ross Andersen, Retired (2017)

Purpose: Address application of the code requirements across multiple devices.

Item under Consideration: Amend NIST Handbook 44 General Code as follows:

G-S.5.2.2. Digital Indication and Representation. – Digital elements shall be so designed that:

- (a) All digital values of like value in a system agree with one another.
- (b) A digital value coincides with its associated analog value to the nearest minimum graduation.
- (c) A digital value "rounds off" to the nearest minimum unit that can be indicated or recorded.

(d) A digital zero indication includes the display of a zero for all places that are displayed to the right of the decimal point and at least one place to the left. When no decimal values are displayed, a zero shall be displayed for each place of the displayed scale division. [Nonretroactive as of January 1, 1986]

(e) A digital value that is electronically summed from the digital indications of multiple independent devices shall be mathematically correct. [Nonretroactive as of January 1, 20XX]

(Amended 1973, and 1985, and 20XX)

Background/Discussion: See Appendix A, Page S&T-A5.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

8. S&T 2017 New Item – General Code - G-UR.3.3. Position of Equipment

Source: Illinois (2017)

Purpose: Eliminate interpretation differences, while also demonstrating an apparent need for customer readability and giving the statutory authority permission to require visible indications for ease of test procedures.

Item under Consideration: Amend NIST Handbook 44 General Code as follows:

G-UR.3.3. Position of Equipment. – A device or system equipped with a primary indicating element and used in direct sales, except for prescription scales, shall be positioned so that its indications may be accurately read and the weighing or measuring operation may be observed from some reasonable "customer" and "operator" position. The permissible distance between the equipment and a reasonable customer and operator position shall be determined in each case upon the basis of the individual circumstances by the official with statutory authority, who shall base the determination on "customer readability" and ease of testing procedures, particularly the size, character, and position of the indicating element. (e.g., A deli customer shall be able to read the indications from the patron side of the deli counter, whereas a truck driver shall be able to read the indications from the cab of the vehicle.) (Also see G-UR.4.4. Assistance in Testing Operations. and Appendix D. direct sales.)

Background/Discussion: See Appendix A, Page S&T-A9.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

9. S&T 2017 Carryover Item – LMD Code - Recognized the Use of Digital Density Meters

Source: Missouri (2016)

Purpose: Allow the use of digital density meters for inspections of meter for viscous fluids such as motor oils, diesel exhaust fluid (DEF) and antifreeze.

Item under Discussion: Amend NIST Handbook 44 Liquid Measuring Devices Code as follows:

Develop provisions in various LMD Codes of Handbook 44 that would recognize the use of digital density meters in lieu of volumetric provers, or the use of flasks and thermometers in the case of gravimetric testing) when testing meters used to dispense certain viscous fluids such as motor oil, DEF, antifreeze, syrups, etc..

"Digital density meters may be a solution for testing motor oil, DEF and anti-freeze meters."

Background/Discussion: See Appendix A, Page S&T-A17.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

10. S&T 2017 Carryover Item – VTM Code - S.3.7. Manifold Hose Flush System

Source: New York (2016)

Purpose: Recognize the use of hose flush systems in the HB 44 VTM code.

Item under Consideration: Amend NIST Handbook 44 Vehicle Tank Meter Code as follows:

<u>S.3.7. Manifold Hose Flush System. – A hose flush system to clear the hose of product may be installed in the manifold when multiple products are dispensed through a single meter and hose under the following conditions:</u>

(a) the inlet valves for the system are conspicuously located above the bottom framework of the truck; and

(b) the inlet valves for the system are not connected to any hose or piping (dust covers are permitted) when not in use; and

(c) the discharge hose remains of the wet hose type; and

(d) the direction of flow for which the system may be set at any time is definitely and conspicuously indicated; and

(e) a recorded representation of each flush is maintained for inspection.

Background/Discussion: See Appendix A, Page S&T-A18.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

11. S&T 2017 New Item – VTM Code - S.5.7. Meter Size

Source: City of Madison, Wisconsin (2017)

Purpose: Remove a marking requirement that is no longer necessary due to changes in the product depletion test tolerance.

Item under Consideration: Amend NIST Handbook 44 Vehicle Tank Meter Code as follows:

S.5.7. Meter Size. Except for milk meters, if the meter model identifier does not provide a link to the meter size (in terms of pipe diameter) on an NTEP Certificate of Conformance, the meter shall be marked to show meter size.

[Nonretroactive as of January 1, 2009] (Added 2008)

Background/Discussion: See Appendix A, Page S&T-A20.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

12. S&T 2017 New Item – VTM Code - N.4.X. Automatic Stop Mechanism, T.X. Automatic Stop Mechanism and UR.2.6. Automatic Stop Mechanism

Source: City of Madison, Wisconsin (2017)

Purpose: Incorporate the automatic stop mechanism test requirement in NIST Handbook 112 EPO 23 Vehicle-Tank Meters, Power Operated into Handbook 44 so that it is enforceable.

Item under Consideration: Amend NIST Handbook 44 Vehicle Tank Meter Code as follows:

N.4.X. Automatic Stop Mechanism. - The automatic stop mechanism shall stop the flow within one-half the minimum interval indicated.

T.X. Automatic Stop Mechanism. - The automatic stop mechanism shall stop the flow within one-half the minimum interval indicated.

U.R.2.6. Automatic Stop Mechanism. - The automatic stop mechanism shall stop the flow within one-half the minimum interval indicated.

Background/Discussion: See Appendix A, Page S&T-A43.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

Background/Discussion: See Appendix A, Page S&T-A20.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

13. S&T 2017 Carryover Item – LPG & NH3 Code - N.4.2.3. For Wholesale Devices

Source: NIST Office of Weights and Measures (2016)

Purpose:

- 1) To specify the purpose of special tests conducted on Wholesale LPG and Anhydrous Ammonia Liquid-Measuring Devices;
- 2) To specify that the special tests are to be conducted at or slightly above the designated flow rates in the referenced paragraph; and
- 3) To specify that the special tests are not to be conducted below the device's marked minimum discharge rate.

Item under Consideration: Amend NIST Handbook 44, Liquefied Petroleum Gas and Anhydrous Liquid-Measuring Devices Code as follows:

N.4.2.3. For Wholesale Devices. – A wholesale device shall be so tested at a minimum discharge rate of: <u>"Special" tests shall be made to develop the operating characteristics of a measuring system and any special elements and accessories attached to or associated with the device. "Special" tests shall include a test at or slightly above the slower of the following rates:</u>

- (a) 40 L (10 gal) per minute for a device with a rated maximum discharge less than 180 L (50 gal) per minute-:
- (b) 20 % of the marked maximum discharge rate for a device with a rated maximum discharge of 180 L (50 gal) per minute or more₅; or

(c) the minimum discharge rate marked on the device, whichever is least.

In no case shall the test be performed at a flow rate less than the minimum discharge rate marked on the device.

(Amended 1987 and 20XX)

Background/Discussion: See Appendix A, Page S&T-A27.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

14. S&T 2017 New Item – Appendix A – Fundamental Considerations: Section 4.4. General Considerations

Source: Ross Andersen, Retired (2017)

Purpose: Address the application of the code requirements across multiple devices.

Item under Consideration: Amend NIST Handbook 44, Appendix A – Fundamental Considerations as follows:

4.4. General Considerations. – <u>Code requirements are applied only to a single device or system, unless</u> specifically stated in the code. The official may encounter equipment where the digital indications from more than one device are electronically summed. This may be done in multiple ways. Each device may have its own indicating element and the sum is indicated on a separate, associated indicator which is interfaced directly with each device (i.e. a computer or console via cable or even bluetooth wireless communication). The indicating elements of the individual devices may be enclosed in a single housing, with separate indicators for each device and a separate indicator for the electronic sum. An electronic sum of measured values from multiple devices is not subject to code requirements, except that it be mathematically correct, i.e. add up to the proper sum - See General Code G-S.5.2.2.(e).

The simpler the commercial device, the fewer are the specification requirements affecting it, and the more easily and quickly can adequate inspection be made. As mechanical complexity increases, however, inspection becomes increasingly important and more time consuming, because the opportunities for the existence of faulty conditions are multiplied. It is on the relatively complex device, too, that the official must be on the alert to discover any modification that may have been made by an operator that might adversely affect the proper functioning of the device.

It is essential for the officials to familiarize themselves with the design and operating characteristics of the devices that he inspects and tests. Such knowledge can be obtained from the catalogs and advertising literature of device manufacturers, from trained service persons and plant engineers, from observation of the operations performed by service persons when reconditioning equipment in the field, and from a study of the devices themselves.

Inspection should include any auxiliary equipment and general conditions external to the device that may affect its performance characteristics. In order to prolong the life of the equipment and forestall rejection, inspection should also include observation of the general maintenance of the device and of the proper functioning of all required elements. The official should look for worn or weakened mechanical parts, leaks in volumetric equipment, or elements in need of cleaning.

Background/Discussion: See Appendix A, Page S&T-A33.

Additional letters, presentations and data may have been part of the committee's consideration. Please refer to <u>http://www.ncwm.net/meetings/interim/publication-15</u> to review these documents.

15. S&T 2017 New Item – Appendix A – Fundamental Considerations: Section 4.4. General Considerations

Source: Dmitri Karimov (LC) and Tina Butcher (NIST OWM)

Purpose: To align other measuring device codes with the changes adopted in S&T LPG & NH₃ Code Item 332-3 (S.2.1. Vapor Elimination) in 2016.

Item under Consideration: Amend the requirements for vapor elimination in the following NIST Handbook 44 Sections and Paragraphs as outlined below:

- Section 3.30 Liquid-Measuring Devices Code (S.2.1);
- Section 3.31 Vehicle-Tank Meters Code (S.2.1);
- Section 3.35 Milk Meters Code (S.2.1);
- Section 3.36 Water Meters Code (S.2.2.1); and
- Section 3.37 Mass Flow Meters Code (S.3.3)

3.30. Liquid-Measuring Devices

S.2. Measuring Elements.

S.2.1. Vapor Elimination.

- (a) A liquid-measuring device shall be equipped with <u>an effective</u>, a vapor or air eliminator or other automatic means to prevent the passage of vapor and air through the meter.
- (b) Vent lines from the air or vapor eliminator shall be made of <u>appropriate non-collapsible</u> metal tubing or other rigid material.

(Amended 1975 and 2017)

S.2.1.1. Vapor Elimination on Loading Rack Metering Systems.

- (a) A loading rack metering system shall be equipped with <u>an effective</u>, a vapor or air eliminator or other automatic means to prevent the passage of vapor and air through the meter unless the system is designed or operationally controlled by a method, approved by the weights and measures jurisdiction having control over the device, such that air and/or vapor cannot enter the system.
- (b) Vent lines from the air or vapor eliminator (if present) shall be made of **appropriate non-collapsible metal tubing or other rigid**-material.

(Added 1994)

(Amended 2017)

3.31. Vehicle-Tank Meters

S.2. Design of Measuring Elements.

S.2.1. Vapor Elimination.

(a) A metering system shall be equipped with an effective vapor or air eliminator or other automatic means to prevent the passage of vapor and air through the meter.

(b) Vent lines from the air or vapor eliminator shall be made of metal tubing or some other suitable rigid material appropriate non-collapsible material.

(Amended 1993) (Amended 2017)

3.35. Milk Meters

S.2. Design of Measuring Elements.

S.2.1. Vapor Elimination.

- (a) A metering system shall be equipped with an effective, vapor eliminator or other automatic means automatic in operation to prevent the passage of vapor and air through the meter.
- (b) Vent lines from the air (or vapor) eliminator shall be made of metal tubing or some other suitably rigid material appropriate non-collapsible material.

(Amended 2017)

3.36. Water Meters

S.2.2. Batching Meters Only.

S.2.2.1. Air Elimination.

(a) Batching meters shall be equipped with an effective, automatic means to prevent the passage of vapor and air through the meter air eliminator.

(b) Vent lines from the air or vapor eliminator shall be made of appropriate non-collapsible material. (Amended 2017)

3.37. Mass Flow Meters

S.3.3. Vapor Elimination.

- (a) A liquid-measuring instrument or measuring system shall be equipped with an effective, <u>automatic</u> vapor or air eliminator or other effective means, automatic in operation, to prevent the measurement of vapor and air.
- (b) Vent lines from the air or vapor eliminator <u>if present</u> shall be made of metal tubing or some other suitable rigid material appropriate non-collapsible material.

(Amended 1999 and 2017)

S.3.3.1. Vapor Elimination on Loading Rack Liquid Metering Systems.

(a) A loading rack liquid metering system shall be equipped with a vapor or air eliminator or other an

<u>effective</u>, automatic means to prevent the passage of vapor and air through the meter. **Such means might** <u>include, but is not limited to a unless the</u> system <u>that is</u> is designed or operationally controlled by a method, approved by the weights and measures jurisdiction having statutory authority over the device, such that neither air nor vapor can enter the system.

(b) Vent lines from the air or vapor eliminator (if present) shall be made of <u>appropriate non-collapsible</u> metal tubing or other rigid material.
 (Added 1995)

(Amended 2017)

Background: The NCWM adopted the following changes to the LPG and NH₃ code at its Annual Meeting in July 2016:

S.2.1. Vapor Elimination. –

(a) A device shall be equipped with an effective <u>automatic</u> vapor eliminator or other effective means to prevent the passage of vapor through the meter.

(b) Vent lines from the vapor eliminator shall be made of appropriate non-collapsible material.

(Amended 20XX)

The proposed changes will align other codes with the above changes to the LPG and NH_3 code and will help ensure consistency across the various measuring device codes in NIST Handbook 44. This would help ensure more uniform interpretation of the requirements and facilitate application by officials and industry.

The proposed changes make the requirement less design-specific and more focused on ensuring that the means for eliminating air or vapor are effective, including that the vent lines not be susceptible to restriction. The proposed changes also clarify that the provision for vapor elimination must be automatic in nature in order to be considered effective.

NIST OWM in its analysis of the 2016 S&T Agenda Item referenced above suggested that a similar change be proposed, where necessary, to corresponding requirements in other measuring codes and encouraged the Committee to consider including such an item on its agenda in the 2016-2017 NCWM cycle.

Note that the Mass Flow Meters Code states "means to prevent the measurement of vapor and air" while other codes state "means to prevent the passage of vapor and air through the meter," but such distinction is probably justified. Consequently, no modifications are proposed to align this language with other codes.

Recommendation: The Sector is asked to review the proposed change and to provide input that would assist the submitters in refining the proposal as needed.
